

**PLAKA - VENTILMUR**

Ventilation casing for brickwork outer leafs  
REF 02.09.01 - Version V01 - 10/08/2020

**Description**

The plastic casing VENTILMUR guarantees a good ventilation of the cavity width of the cavity walls. This casing helps to stop the introduction of humidity from outside in the cavity. In addition, it prevents some insects or other animals (mice, ...) to enter the cavity width through the open joints. The VENTILMUR has also an aesthetic impact and gives an even visual impression of the façade. Small ribs on the bottom surface provide the anchoring into the mortar.

**Application fields**

In open joints at the base of masonry walls and at the lintels.

**Properties**

Mechanical properties	
Colour	Gray (standard) White (on request) Black (on request)
